

perfect SWEEP™

CORDLESS SWEEPER

Quick and Easy Assembly

- 1** Lay four handle sections out in a line with the handle grip at the top and the threaded hole at the bottom.
- 2** Fit smaller tapered end of section into larger end of the next one and push together for a snug fit.
- 3** With pieces assembled, strike down on a hard surface to firmly lock sections together. (Use a book or magazine to protect your floor).
- 4** Lift the bail (threaded metal bar on the top of sweeper) to vertical position. Screw sweeper handle all the way down to the "shoulder" of the threaded metal bail. Failure to do this could cause the bail to break.
- 5** Snap brush comb on handle.
